

Windows Embedded CE makes both an internet compatible sewing machine for the international market as well as electronic tickets for public transport possible. Zühlke is your specialist for individual development of solutions with Windows Embedded CE.

Consulting **Development** Integration

Windows Embedded CE

Flexible solution

The successful real-time operating system Windows Embedded CE is widely used. Thanks to progressive tools it enables the development of intelligent linked devices and controls which serve as a flexible basis of new solutions.

This can be the control of a sewing machine, the control terminal for an industrial machine or a wireless ticketing system.

The right know how counts

In order to develop applications on Windows Embedded CE successfully and keep the manufacturing costs low, a good understanding of interaction between hardware and operating system is necessary.

Electronics are often modified to reduce manufacturing costs. This necessitates the adaptation of the Windows Embedded CE driver. If – in addition – a graphics interface is necessary for the driver, then this can easily be implemented with the Compact .NET Framework.

Using these aids, a software engineer with the correct experience in electronics and software can develop a complete application or implement driver programming independently and efficiently.

Support from Zühlke

Thanks to many years of experience in the conversion of Windows Embedded CE projects for industry, telecommunications and transport, we support your development of new, trend setting products with convincing quality and economy:

- Complete solutions: integrated, real time, with optimised manufacturing costs
- Connection to new communication technologies
- Porting to new hardware platforms and driver development
- Technology consultation for Windows Embedded CE and .NET Compact Framework
- Project oriented increase in knowledge
- Development of ergonomic user interfaces

Latest knowledge

At Zühlke you will find experts for complex Windows Embedded CE tasks who can fall back on our close relationship with Microsoft Redmond for the latest information and developments.

The wide knowledge in hardware and software development under one roof guarantees the fast development of your Windows Embedded CE project – almost immediately.

Using Zühlke you will use the latest technology. We look forward to hearing from you.
