

Team enabling involves more than just the transfer of expertise. While working on a project, the team builds up knowledge that can be used in subsequent projects. Zühlke takes responsibility for the technical implementation of the project.

# Team Enabling for Windows Embedded CE

The coach assists the team with the project and conducts regular reviews. With this concrete feedback, the team learns rapidly and achieves autonomy in the fastest possible time.

At the start of a project, Zühlke also assumes technical project responsibility for architecture, among other aspects. This approach assures that the resulting solution meets all requirements. At the same time, the coach contributes his experience on iterative development from other projects to the project at hand.

## Your benefits

- Practical training:  
Zühlke carefully adapts the training content to your project team's responsibilities and knowledge to achieve an optimum cost-benefit ratio.
- Project-focused implementation:  
The fundamentals covered are applied directly to the project instead of to some esoteric examples with no connection to actual practice.
- Accountability for results:  
Zühlke takes responsibility for the technical implementation of the project (architecture, procedure, quality). This gives the team a sense of security and confidence and paves the way to project success.

Build up knowledge while working on your project. Contact us and let your team profit, too.

## Initial situation

Is Microsoft Windows Embedded CE a new technology for your team? In no time, Zühlke experts bring your employees up to a level of expertise that allows them to use this new technology in their own projects independently and efficiently.

## Learning that yields results

Knowledge is built up in two ways:  
First, Zühlke teaches the team the technical fundamentals in tailor-made courses. The coach gears his instruction to the level of knowledge the project members have. That means that an introduction to object orientation for C programmers, for example, might be one of the topics covered. Secondly, the team are able to build up their practical experience under the guidance of a coach. Team enabling focuses on having the team take the fundamentals they have learned and apply them to a concrete project.
