

With external assistance the challenges of project work can be mastered more easily and the results achieved much quicker. Zühlke brings in years of experience from many successful projects.

Consulting Development Integration

# Projekt Assessments

A typical assessment by Zühlke runs as follows:

1. A stock take using structural interviews, document insight and if necessary an inspection of the software architecture with appropriate software tools.
2. Analysis of the outcome with the customer to place the results in the right context.
3. Presentation of the results and suggestions for improvements.
4. Decision about the timing and order of implementing the measures.
5. Implementation, possibly with targeted support of Zühlke specialists.
6. Review of the desired effect.

## Project work

Many development projects take too long, cost too much, or both. Even though right now the current project status is not very transparent, you must make important decisions. Or do you have the feeling that development costs for software are too high or the quality is not right?

## Help with assessment

An assessment can help in these cases to confirm what is going right and identify potential for improvement. Such an evaluation takes into account the existing situation of a project and/or software architecture. Specialists analyse the current status, recognise possible changes and compile firm measures.

## Service offering

Professional project completion belongs to our central know how. Zühlke has gained experience from over 5000 successful projects and developed best practise in project management. All our employees are used to working methodically – successful projects are no coincidence. Benefit from this enormous wealth of experience, by allowing Zühlke to analyse your project or software architecture systematically and objectively. The specialists will tell you what is going well and where there is room for optimisation improvements. It is crucial to obtain an independent, objective and impartial view.

## Your benefit

Two examples of successful assessments:

The management of a large enterprise is dissatisfied with the conversion times of the specific customisation of a software. Zühlke analyses software architecture, projekt und processes. After implementing the suggested improvements the customer can produce faster and more efficiently.

The project manager of a large software project for a machine controller recognizes that there are repeated delays in the development. He initiates a focused assessment by Zühlke. Together with the project and the line management Zühlke specialists convert each step and supervise the effects. With the suggestions from neutral view the project can be terminated faster and successfully.

Perhaps are there optimisation possibilities in your project? Contact us.
