

SOA (Service Oriented Architecture) is no longer just hype – it has become reality. SOA, as an integrated service, enables flexible business processes, giving you a vital competitive advantage. Zühlke has the necessary expertise to assist you with the definition and implementation of your SOA.

Consulting Development Integration

SOA Service Oriented Architecture

Context

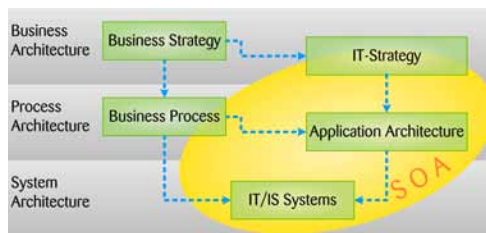

Whether the use of SOA is beneficial or not depends to a large extent on the individual company and it brings in strategic implications that are critically significant for companies. As far as integration projects are concerned, it is certainly worth considering the use of SOA.

Opportunities and Risks

Prior to the implementation of SOA, a company should weigh up the specific opportunities and risks involved. An important aspect in this respect is the drafting of a solid business strategy and an associated IT strategy, as well as the implementation of these. A clear vision of the required application architecture permits the efficient allocation of investments and the provision of direct support to business goals. A coordinated understanding of business processes, involving the regulation of roles and areas of responsibility (governance) is an important prerequisite for the implementation of a SOA.

Solution

Zühlke provides comprehensive assistance on your progress from working out the IT strategy to defining the processes and the architecture and finally implementing your SOA. We can provide you with the benefit of experience we have gained in many projects as you tread the path from vision to productive use of SOA.

- Our experts host workshops on your behalf and then provide assistance with drafting the SOA vision for your business, drawing up process descriptions, implementing the SOA and ensuring that the necessary governance is well established in your company.
- Our management consultants and business analysts support you in documenting and adapting your business processes and with the definition of your IT strategy.
- Our software engineering consultants implement your IT strategy by carrying out an assessment of the existing architecture, from which they derive a SOA development road map. They then back up this development strategy by building prototypes.
- Our software engineers create and launch the services required in cooperation with you.

Benefits

Benefit from our experience – we provide help in finding the right path through the dense and confusing forest of terms, definitions, technical possibilities and interpretations.

You benefit from our assistance when creating a service oriented architecture as you can reach the productive phase considerably quicker. By using a targeted approach, you are able to minimise the effort involved.

Do you have questions regarding SOA? Are you contemplating implementing SOA? Have you already initiated the process but can't really make progress? Just get in touch with Zühlke! We will assist you in successfully implementing your SOA.
