

Introducing a new technology is always associated with investment risks. However, with Zühlke you can minimise such risks and focus on putting your ideas and visions into practice.

# .NET Team Enabling

## .NET development platform

Microsoft .NET consists of a virtual runtime environment, a Windows class library and an environment for software developers. With applications such as WPF (Windows Presentation Foundation), WCF (Windows Communication Foundation) and Silverlight, .NET has become the most important platform for software applications alongside Java/JEE. How can your particular project benefit from .NET?

## .NET Team Enabling

Zühlke developed .NET Team Enabling as a technique for the acquisition of .NET knowledge and skills. This allows your employees to make use of .NET independently and efficiently after just a short induction period. Your team will learn to work with .NET in its own, real project – initially managed by Zühlke and then independently.

With .NET Team Enabling we have successfully helped teams with experience of Cobol, C++ and older C# versions. Now they obtain the skills required to work with the latest .NET versions.

## The steps to success

.NET Team Enabling consists of three steps:

1. We provide the team with the basic theoretical knowledge.
2. This knowledge is enhanced in a workshop.
3. The coach helps the team set up the development environment and the project and provides support during the subsequent project realisation.

## Tailor-made team enabling

The Zühlke coach can provide your team with help with regard to .NET issues and takes into account development processes implemented in your organisation, such as Scrum or Rational Unified Process (RUP). During the course of the project, the coach gradually hands over responsibility to your development team. The team will then, still supported by the coach, quickly realise its full potential in its own particular area of work. You too can benefit from the experience of the Zühlke coaches, who regularly make key presentations at top conferences and author popular and widely read blogs.

## .NET application development

As a Microsoft Gold Certified Partner and with a wealth of experience from more than 5000 projects, we are the obvious first port of call for the realisation of .NET solutions. If you need help with regard to .NET Team Enabling in terms of requirements or usability engineering, or software design or realisation, Zühlke can provide you with all of this from one source.

## Benefits for you

- Effective acquisition of skills and expertise by means of goal oriented and on-site training and coaching whilst managing real projects.
- Development of real independence without having to learn by making mistakes.
- Increased attractiveness of your products, making sure you are ready for the upturn in the economy!

Enhance your business case with the new possibilities offered by .NET! Benefit from the .NET experience that Zühlke provides. Together with your team, we bring your ideas and visions to life with .NET.
