

With a independent review of software projects you will get a second opinion and valuable suggestions so that your project will be a success. Zühlke experts examine development processes, architecture, project leadership, design, general setup as well as communication channels.

Consulting Development Integration

Software Project Reviews

Reasons for Review

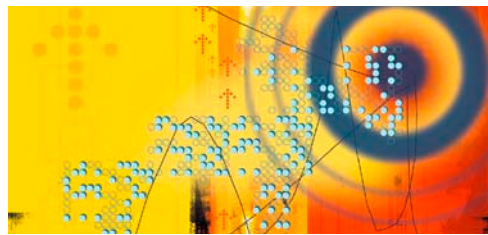

There are different reasons for reviewing software projects. Generally, it is of interest if a project can be undertaken and completed successfully, and if subsequent projects can be started on a healthy basis. To complete a software development project on time it is useful to have a review at different points. Several forms of reviews are possible, starting with the choice of software companies involved up to the quality checks in the implementation phase. Often it is useful to clarify if a follow-on development of what has already been achieved is meaningful. Usually the client wants to get a second independent opinion in order to guarantee investments are being made correctly.

Basis for Reviews

Reviews can be a dual experience for those involved. Project members often do not know how to behave when mistakes become apparent. It is important therefore, always to communicate openly and in a solution orientated manner. Possibilities to improve on project success rate and communication are often found during reviews. Basis for the review is – beside the documents – also an open kind of communication with the personnel involved.

Results of the Reviews

The result of a review is a recommendation for the way forward. Zühlke experts present the results

and deliver a report with proposals for solutions. If necessary we can advise you during the implementation of the recommendations or implement the suggestions with you.

When providing reviews, we examine:

- The software development process
- The architecture's fitness for purpose
- The efficiency of the project management
- The reusability of software components
- The underlying business processes
- The evaluation of implementation partners
- The total condition of the project

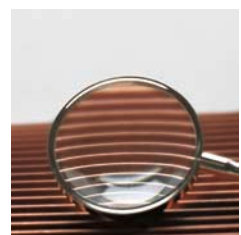

Our Team

Architects and consultants with a broad experience in software development and project management are used in the reviews. They possess the necessary sensitivity and technical authority.

Our Experience

We have many years of experience and a solid knowledge of software development processes, architectures, project management, design and implementation of vast and complex software projects.

Do you plan a review of a project shortly? Call us and challenge us.
