

Intensive teamwork – with an experienced coach – is very productive. Whilst working on the project your team will gain knowledge at a minimal cost and in a short space of time, which can be reused time and again on future projects.

Consulting Development Integration

LabVIEW Coaching

Timely Specialist Knowledge

LabVIEW is widely used and is particularly useful for application development in manufacturing as well as in measuring and inspection technologies. To achieve security for a smooth development and care of an application, user-specific knowledge is often developed internally. For special tasks however, such as complex software architectures, and FPGA real time applications or GMP conform developments, external expert knowledge is needed. The ideal solution here is coaching by an expert. This is where Zühlke comes in.

A Coach leads your Team

Because of our broad LabVIEW experience we can judge your project independently and alert your team to possible stumbling blocks and risks. Together, we compile different solutions, and by “training on the job” your developers learn to produce demanding LabVIEW applications efficiently and systematically. They can pull the coach back in at a later stage for further consultation, reviews or demanding programming, as and when required.

Programming Style and Best Practices

Based on your concrete project and using best practices, we impart to your specialists the basis for a successful development. This way the code and documentation are qualitatively substantially improved.

Your Advantages

Independent and impartial evaluation of different solutions for the fulfilment of your requirements. Purposeful support for improved quality in respect of function, programming and documentation. Your developer team is empowered to use the LabVIEW technology even more efficiently. Systematic conversion and development of your application knowledge.

Benefit from our many years of experience in the conceptualisation and implementation of LabVIEW applications for testing and production environments. Our specialists, who are well practised in coaching and mentoring, really contribute to the personal development of your team.
