

Course D10136

# Design For Developers

- Talk to designers from a basis of mutual understanding
- Learn basic design skills
- Using and developing designs

## Description

The understanding between the development and design teams is a key factor in ensuring a top notch website, app or software user experience. Minor and less minor misunderstandings are a constant headache.

Our course helps you to better understand the principles of design. No particular design talent is required. We focus on the 90% of this topic which can be mastered without any talent.

Design comes from doing. We will therefore practice as much as possible, ideally with whichever tool you are most familiar with.

## Goals

The design knowledge you acquire will help you talk with designers from a base of mutual understanding. Participants will learn to use and develop designs, helping to facilitate a smoother collaboration between designers and developers.

## Participants

Developers, UI developers, web developers, business analysts, project managers and anyone else who wants to improve their input into the design and how they collaborate with design specialists.

## Duration

1 day

## Dates and Prices

[www.zuhlke.com/D10136](http://www.zuhlke.com/D10136)

## Level

Beginner/Intermediate
