CPRE Advanced Level: Elicitation and Consolidation

- Certification course for the qualification of IREB “Certified Professional for Requirements Engineering – Advanced Level, Elicitation and Consolidation”
- Expand your knowledge and experience of requirements elicitation and consolidation

Description

The course content is based on the IREB teaching plan for the “Certified Professional for Requirements Engineering – Elicitation and Consolidation, Advanced Level” IREB syllabus.

The focus is set on acquiring and developing advanced requirements engineering topics in the area of: requirements sources, elicitation techniques, consolidation techniques and communication. In addition to the theoretical foundations, the course places great emphasis on practical exercises. Hence, practical components account for roughly half the course timetable.

The certification itself consists of two parts and is optional. The written examination, which is the first part of the certification, is held during the afternoon of the third day. For those who are not taking part in the examination, the instructor will be available during this period in order to clarify any questions and to go into more detail about the course content. The second part of the certification involves the implementation of the taught course content in the form of a practical assignment. This part is not included in the actual course and is conducted by an independent examiner.

Goals

Course participants will expand their knowledge of requirements elicitation and consolidation. Some of this knowledge will be consolidated by practical exercises. Consequently, participants will be able to select the appropriate approach for a project situation and apply the most effective techniques. They will also be able to mediate in simple conflict situations in the field of requirements elicitation and to discover and highlight communication disorder.

Participants

The course is aimed at participants who already have theoretical knowledge and practical experience of Requirements Engineering.

Duration

3 days

Dates and Prices

www.zuhlke.com/D10085

Level

Advanced

Content

- Knowledge of requirements sources
- Advanced stakeholder management
- Knowledge and application of elicitation techniques
- Survey, observation and creativity techniques for requirements elicitation
- Communication for requirements engineering
- Recognising conflicts and finding Solutions
- Knowledge and application of various consolidation techniques

Language

German (course materials in German)

Organisation

Public course or company course at Zühlke or at the client's premises.

Course requirements

Candidates for the CPRE Advanced Level module examination must already have received the “IREB Certified Professional for Requirements Engineering - Foundation Level” certificate.
