

IT Target Operating Model

Maximising the value delivered by IT through alignment with business strategy and goals and a pragmatic change roadmap

More and more businesses are feeling the impact of technological disruption. By aligning their IT operations with their corporate strategy, businesses are better able to focus on value creation, innovation, adapting to market needs, and retaining their competitive edge. An efficient IT structure means better budget allocation and enables data insights generation, driving sustainable growth and performance excellence.

Overview of an IT Target Operating Model

Four step approach to definition and implementation

Outcomes

- Comprehensive value delivery chain with reduced time to value
- Improved quality of digital experiences and technology
- Improved ROI from investment in digital delivery organisation
- Improved responsiveness to changing market needs
- Empowered teams in 'full flow'
